

ARTIFICIAL INTELLIGENCE

is now standard functionality within ARCUS[®] Supplier Management Software. Users can scan documents as they are uploaded to ensure accuracy and validity, and configurable information is extracted directly from documents and entered into supplier questionnaires.

FEATURES

VERIFIES DOCUMENTS AT THE POINT OF UPLOAD

Key documents such as insurance policies, Modern Slavery statements, OHSAS 18001 and CHAS certificates amongst others are scanned by artificial intelligence at the point of submission to verify the correct type of document has been uploaded; and any other information provided by the supplier matches that of the uploaded document.

FLAGS POTENTIAL DISCREPANCIES

Any inaccuracies within uploaded documents such as incorrect certificates, missing data or out of date information is noted by AI before asking the supplier to update the information. The supplier is given the opportunity to change the document or proceed regardless.

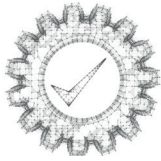

MACHINE LEARNING

Artificial intelligence uses machine learning to contextualise uploaded documents, using algorithms to continually learn from experience. The 99% accuracy rate allows professionals to effectively prioritise documents for review.

DOCUMENT INFORMATION EXTRACTION

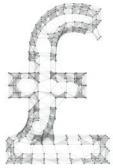

New functionality enables automatic population of questionnaire answers. Users can now extract configurable information (start date, end date, category, etc.) from uploaded documents, streamlining the questionnaire completion process and improving data accuracy.

BENEFITS

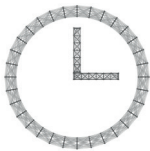

AUTOMATES COMPLIANCE

Artificial intelligence automates compliance with industry, company and government regulations to provide evidence of due diligence while protecting brand and reputation.

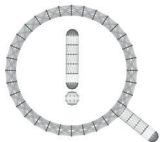

REDUCES COST

Artificial intelligence reduces the cost of the supplier on-boarding process, as less working hours are wasted on easily automated tasks leading to more productive employees and a more cost efficient supply chain.

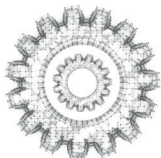

SAVES TIME

Time is one of the most valuable commodities within a business; using AI allows businesses to prioritise and process documents more quickly and efficiently, making the supplier on-boarding and approval process quicker allowing employees to focus on more value added tasks.

REDUCES RISK

Using AI to verify key documents reduces risk by easily identifying non-compliant documents and suppliers, ensuring adherence to legislation while increasing confidence in the data received, contributing to the protection of company brand and reputation.

AUTOMATES TASKS

Tedious tasks such as checking large quantities of documents in the supplier on-boarding process is automated using AI, freeing employee time while reducing human error and increasing accuracy.

The AI functionality within ARCUS® SIM provides our teams with the confidence that the information submitted by the supplier is accurate. This enables us to prioritise documents and suppliers for immediate review. ”
